Smart Industry Readiness Index (SIRI)

Technoviz Automation Solutions Pvt. Ltd.

Accelerate Your Smart Manufacturing Journey with SIRI Assessment

Evaluate. Transform. Compete.

SIRI – Smart Industry Readiness Index

The Smart Industry Readiness Index (SIRI) is a globally recognized framework developed by **Singapore's Economic Development Board (EDB)** in partnership with **World Economic Forum**. It helps manufacturers evaluate their readiness for Industry 4.0 and identify specific areas for digital transformation.

Why SIRI Matters

- Gives clear visibility into where your factory stands on the Industry 4.0 journey.
- Offers a structured and data-driven approach to transformation.
- Helps align technology investment with business goals.
- Recognised globally as a neutral and trusted assessment model.

Why Every Manufacturer Should Get SIRI Assessment

SIRI isn't just an evaluation—it's a strategic roadmap for achieving smart manufacturing excellence.

- **Identify Your Digital Maturity Level** – Get a clear understanding of your current state across all aspects of operations—from production and maintenance to workforce and data systems.
- **Prioritise High-Impact Opportunities** – SIRI helps you focus on areas that deliver maximum ROI in your digital transformation efforts.
- **Benchmark Against Global Standards** – See how your plant compares with industry peers and world-class manufacturers.
- **Build a Roadmap for Industry 4.0** – Receive a customised digital transformation plan aligned with your organisations vision and resources.
- **Strengthen Competitiveness** – Improve efficiency, quality, and agility while preparing your workforce for the future of manufacturing.

SIRI Framework

3 Core Building Blocks

PROCESS

A strong foundation in process is what drives productivity and consistency across manufacturing operations. The SIRI framework examines how well your organization manages end-to-end workflows and evaluates the integration between different operational areas.

TECHNOLOGY

Technology forms the backbone of Industry 4.0 transformation. The SIRI assessment measures how effectively your business uses automation, connectivity, and intelligence to create a digital ecosystem that drives efficiency and innovation.

ORGANIZATION

People and leadership are at the heart of digital transformation. The organization component of SIRI focuses on how effectively your teams, structure, and culture support your digital strategy. It evaluates whether your workforce is ready, skilled, and aligned with your transformation goals.

SIRI Framework – 16 Dimensions

SIRI uses these 16 dimensions to evaluate a factory's maturity level across three transformation stages:

- **Base Stage:** Basic digitization and automation.
- **Intermediate Stage:** Integrated systems and data-driven decision-making.
- **Advanced Stage:** Fully connected, intelligent, and autonomous operations.

Each dimension is scored to generate a Manufacturing Transformation Index (MTI), giving a clear snapshot of the organization's digital readiness and helping prioritize areas for improvement.

PROCESS	TECHNOLOGY	ORGANISATION
Operations	Automation	Strategy
Supply Chain	Connectivity	Leadership
Lifecycle	Intelligence	Workforce
Planning	Cybersecurity	Collaboration
Inventory	Data	Culture
Maintenance	-	-

Kapil Khurana

Author & Certified SIRI Assessor (CSA)

Industry 4.0 & IIoT Expert | Automation Professional
With over 20+ years of industrial experience, worked extensively across automation, control systems, and digital transformation domains. Expertise lies in bridging traditional industrial practices with modern digital technologies, enabling organizations to evolve into truly smart and connected enterprises.

Kapil Khurana, author of the globally available book “Digital Revolution – Industry 4.0 & IIoT,” is a leading book in smart manufacturing and digital transformation.

Kapil Khurana as a SIRI Certified Professional helped organisations to :

- Understand their current Industry 4.0 readiness
- Benchmark against global best practices
- Define structured transformation roadmaps
- Drive measurable improvements in productivity, quality, and efficiency

*Transformation begins with clarity. SIRI gives manufacturers the clarity to act, evolve, and lead.” – **Kapil Khurana (Certified SIRI Assessor)***
